EDUCATION

Grambling State University

Bachelor of Science in Computer Science, GPA: 4.0/4.0

Honor: President's List

Grambling, LA

Expected May 2028

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL, HTML/CSS

Frameworks & Runtimes: Next.js, React, Flask, Node.js, Tailwind CSS

Data & Services: PostgreSQL, Supabase, Redis, SQLAlchemy, Stripe

Testing & Tools: Playwright, Vitest, Git, GitHub Actions, Vercel

Engineering: Full-Stack Development, REST APIs, Authentication, Relational Data Modeling

EXPERIENCE

Kintampo African Market | [Live Site](#) | [GitHub](#)

Mar 2026 – Present

Freelance Full-Stack Developer

Columbus, OH

- Rebuilt and deployed a Next.js storefront for 150+ African and Caribbean products with customer accounts, Stripe checkout, local pickup, and nationwide shipping
- Implemented server-authoritative price validation, Stripe webhooks, unique payment records, refunds, and order-fulfillment workflows with TypeScript, Supabase, and PostgreSQL
- Built staff tools for catalog, inventory, customer, and shipping operations; maintain 61 Playwright tests across 13 files covering checkout, tax, refunds, receipts, navigation, and administrative APIs

PROJECTS

Prince Auto Inventory & POS System | [Live Demo](#) | [GitHub](#)

Aug 2026 – Present

- Built a React, TypeScript, Supabase, and PostgreSQL inventory and point-of-sale application for a mechanic shop with role-based access, shared stock, customer balances, printable receipts, and reports
- Implemented PostgreSQL functions that validate stock and atomically record sales, inventory changes, and financial snapshots; made offline retries idempotent to prevent duplicate sales
- Added an offline sales queue that syncs after reconnection and owner-controlled voids that restore stock while preserving an audit trail

Item7 Food Truck Management System | [Live Demo](#) | [GitHub](#)

Jan 2026

- Developed a Python and Flask ordering and operations application with customer checkout, real-time order tracking, staff scheduling, shift tracking, and role-based management tools
- Modeled users, menu items, orders, schedules, and shifts in PostgreSQL with SQLAlchemy; added CSRF protection, rate limiting, password hashing, and input validation
