

Richard Effah Yeboah

(614) 290-4260 | kkras5050@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

EDUCATION

Grambling State University

B.S. Computer Science (Sophomore) | GPA: 4.0/4.0

Expected May 2028

Ruston, Louisiana

Honors: President's List; CodePath & IBM Alumnus

Relevant Coursework: Data Structures, Algorithms, Software Engineering, Database Systems, Artificial Intelligence, Discrete Structures

PROJECTS

Item7 Food Truck Ordering System | *Python, Flask, PostgreSQL, SQLAlchemy, REST API, Redis, Vercel, Stripe* | [Live Demo](#) | [GitHub](#) Jan 2025 – Apr 2025

- Problem: Inconsistent ordering and data integrity across carts/orders. Action: designed relational schemas and REST API boundaries with server-side validation. Result: reliable CRUD flows supporting 50+ menu items, carts, and orders
- Problem: Fragile checkout states and slow responses under load. Action: implemented RBAC (4 roles), integrated Stripe error handling, and applied Redis caching; deployed serverlessly on Vercel. Result: consistent order states and scalable production access

Full-Stack Portfolio | *Next.js, TypeScript, Tailwind CSS* | [Live Site](#)

Side Project

- Problem: Needed a fast, skimmable way for recruiters to evaluate work. Action: built a component-driven portfolio with reusable sections and SEO-focused structure. Result: quick navigation and maintainable updates

EXPERIENCE

Lovely Queen Mart

E-Commerce Developer

Jan 2025 – Present

Remote

- Problem: Need for end-to-end online ordering for 100+ SKUs. Action: architected and shipped a full-stack platform (React, Node.js, PostgreSQL) with payment integration and fulfillment workflows. Result: production ordering supporting day-to-day operations
- Problem: Checkout friction and inconsistent order states. Action: engineered a custom checkout flow and strengthened order-state consistency. Result: contributed to a ~20% improvement in customer retention

New Life International School

ICT Instructor & Data Administrator

Jan 2024 – Dec 2024

Kronum, Kumasi, Ghana

- Problem: Students needed structured, practical ICT skill-building. Action: designed and delivered hands-on labs and lessons. Result: improved proficiency across core computing and productivity concepts
- Problem: Error-prone record management slowed administration. Action: automated data validation in Excel using advanced functions. Result: reduced processing time by ~35% while maintaining 100% data integrity

God First Printing Press

Graphic Designer

May 2024 – Nov 2024

Kumasi, Ghana (Part-Time)

- Problem: Multiple concurrent client requests with tight deadlines. Action: managed 15+ parallel design deliverables in Photoshop (flyers, banners, logos). Result: maintained a 100% on-time delivery rate for high-priority assets

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML/CSS

Frameworks & Libraries: React, Next.js, Flask, Node.js, SQLAlchemy, REST APIs, Tailwind CSS

Core Concepts: Product Prototyping, Full-Stack Development, Relational Data Modeling, API Design, RBAC, Caching

Developer Tools: Git/GitHub, PostgreSQL, Redis, Vercel, Stripe API, Excel

LEADERSHIP / CERTIFICATIONS

IBM SkillsBuild

IBM Scholar – Data Science Track

May 2025 – Jun 2025

Virtual

- Completed end-to-end data workflows in Python (Jupyter Notebook, Watson Studio); applied data wrangling and statistical analysis across multiple datasets

Affiliations: ColorStack (Member) | CodePath & IBM Alumnus | African Student Association
